

### REMARKS

Reconsideration and allowance in view of the following comments are respectfully requested. The prior art grounds of rejection are respectfully traversed.

In Applicant's view, the claimed inventions differ in a patentable manner from the teachings of Ota (US Patent 5,194,960). According to Ota, each pixel data is multiplied by a weight value and, then, multiplied pixel data are added as an evaluation value. So, the image sensor of Ota should have an arithmetic and logic unit, i.e., a CPU 20 shown in Fig. 1 which can perform the above multiplication and addition.

In contrast, our claimed inventions need only two counters for counting a number of first and second pixels of an image frame. The first pixel has a luminance value being higher than a first predetermined level and the second pixels has a luminance value being lower than a second predetermined level. Thus, our claimed auto exposing arrangements are simpler in structure than that of Ota and more efficient in operation speed.

All outstanding matters having been addressed, it is respectfully submitted that the present application is in a condition for allowance and a Notice to that effect is earnestly solicited.

Respectfully submitted,
